Ḥwt, Ḥwt-wrt, and Ḥwt-ṣnh
HWT

In an important study, J.C. Moreno Garcia has investigated the character of the economy, administration, and territorial organization of rural Egypt in the Old Kingdom. In the course of the investigation, he states his belief that the hwt-hieroglyph reproduces the image of a façade with a side entrance, that is to say an edifice viewed in elevation and not in plan, which to him explains the small rectangle normally in the lower corner of the hieroglyph. He thinks that writings where hwt is drawn with a horizontal line in its upper part confirm his interpretation of the hwt-hieroglyph as the representation of the façade of an edifice. He points out that the same horizontal line appears frequently with signs representing edifices viewed from the front, such as ' or zh, in which cases the line probably corresponds to a cornice or frieze which surmounts the edifice. On the other hand, in the specific case of hwt, he supposes that the line has a relationship with the compound word tp-hwt, ‘roof, terrace,’ and represents a part of the hwt differentiated from the rest of the construction. In other instances where the horizontal line occurs low down in the sign, it may be a question of a socle to the edifice. Yet other representations of hwt present a double line at mid height, an epigraphic detail that also appears in representation of 'h or zh edifices. J.C. Moreno Garcia thinks the double line may correspond to the existence of two stages or a terrace. What is significant to Moreno Garcia is that the line or double line at mid-height otherwise appears only in the 'h or zh edifices, both of which are viewed in elevation.

In fact, the horizontal line in the upper part of the examples of the hwt-sign cited by J.C. Moreno Garcia or for that matter those at mid-height may be explained in another way. The period from which the majority of the examples with the horizontal line derive is the First Intermediate Period to the early Middle Kingdom. This is a time when hieroglyphic signs are strongly influenced by hieratic. This is certainly the case with the sign in question in which the letter t in hieroglyphic versions of the sign becomes a simple horizontal stroke in hieratic versions of the sign. Many of the examples cited by J.C. Moreno Garcia derive from coffins from El-Hawawish (Akhmim), which have been dated by D. Magee and

4 Loc. cit.
5 O. Goelet, Two Aspects of the Royal Palace in the Egyptian Old Kingdom, PhD dissertation, Columbia University, 1982 (= Two Aspects), observes that the spaces between the lines are painted blue or black in examples where the original paint has survived in the depiction of the 'h-hieroglyph.
7 H. Goedicke, Old Hieratic Paleography, Baltimore, Maryland 1988, p. 27a-b (M 6/7). For a hieroglyphic example with three signs conjoined for the plural, see N. de G. Davies, The Mastaba of Ptahhetep and Akhethetep at Saqqareh I, ASE 8, London 1900, Pl. 12 [228].
1. Different graphies of the hwt-sign from El-Hawawish/Akhmim (a–c); Deir-el-Bahri (d–g); Dendera (h); Naga-ed-Deir (i–j), and Dira Abu n-Naga (k–l). (Drawings: E. Brovarski).
the present writer to Eleventh Dynasty.⁸ Figs 1a-c represents only a sampling.⁹ D. Magee suggests a date toward the end of Eleventh Dynasty for one Akhmim coffin,¹⁰ whereas the present writer has dated the coffins prior to the reunification of Egypt under Mentuhotep II.¹¹ Both Fig. 1d and Fig. 1e appear in private inscriptions of the reign of Intef II.¹² Figs 1f-g are found in the tomb of Queen Kemzit at Deir-el-Bahri, while Fig. 1h (ḥwt-kꜣ) occurs in the Dendera chapel of Mentuhotep II.¹³ The first example of the ḥwt-sign from the tomb of Kemzit actually has two lines at mid height, while an example from the ‘Dog Stele,’ of Intef II, Fig. 1i (ḥwt-nṯḥ), has three. In the latter case, it seems unlikely that the three lines would indicate as many stories, especially since they are clumped towards the bottom of the sign. Figs 1a-i all antedate the reunification. It is interesting that none of the hieratic examples of the ḥwt-sign show more than one horizontal stroke, and the hieroglyphic examples with multiple lines very probably reflect the decorative impulses of the time which added inappropriate details to many signs.¹⁴

As we have seen, J.C. Moreno García sees the traditional rendering of the ḥwt-sign as reproducing the image of a façade with a side entrance in one of the two lower corners of the hieroglyph.¹⁵ He also recognizes that the rectangle appears in certain cases in the upper corners of the ḥwt-hieroglyph towards the end of the Sixth Dynasty.¹⁶ H.G. Fischer was probably the first to notice that, from the middle of the Sixth Dynasty, a gradual tendency develops to shift the square to the less crowded space behind the falcon’s head.¹⁷ In itself this refutes the notion that the ḥwt-sign was thought of as representing a façade in the later Old Kingdom since, if one takes the placement of the square literally, the entrance would be suspended from the roof.

H.G. Fischer also remarks that it is probably as a result of this change that the ḥḏḥr-hieroglyph frequently has the small square in two corners (or even three corners) in the

Naga-ed-Deir inscriptions of the First Intermediate Period and that the hwt-sign is similarly abnormal even though it does not contain the falcon.\textsuperscript{18} The placement of the rectangle in two or more corners of the sign has little basis in reality and is presumably just a calligraphic variant. This seems confirmed by another example of the Hthr sign from Naga-ed-Deir in which one of the squares is replaced by a triangle (\textit{Fig. 1j}).\textsuperscript{19}

J.C. Moreno Garcia illustrates two examples of the hwt-sign with entrances in the middle of the baseline (\textit{Figs 1k-l}) which might seem to prove his case.\textsuperscript{20} The first of these is actually surmounted by a cavetto cornice as well. It should be noted, however, that both signs date from the New Kingdom, some thousand years after the other examples of the sign we are discussing, and it is difficult to know what was in the minds of the scribes of the time.

It thus seems likely that the traditional interpretation of the hwt-sign as a rectangular enclosure with the small rectangle in the interior representing an edifice, a tower to protect the entrance of the enclosure or even an entrance of complex type aimed at limited access to the interior is the correct one. In the opinion of the present writer in origin it most probably represents a walled villa, like those that are still seen on the Saqqara Road today, often with gardens or even orchards inside the enclosure.

\textit{HWT-WRT}

\textit{Hwt-wrt} has customarily been interpreted as ‘law court’.\textsuperscript{21} In a recent study, N. Strudwick accepts the juridical nature of this institution.\textsuperscript{22} E. Martin-Pardey has taken exception to this point of view and instead believes the \textit{hwt-wrt} was the central bureau of the kingdom, charged with the organization of corvees and taxes due to the state.\textsuperscript{23} Her opinion is shared by S. Quirke\textsuperscript{24} and more recently J.C. Moreno Garcia.\textsuperscript{25} To the latter the \textit{hwt-wrt} was the central bureau of the vizier which controlled the governmental and administrative activities of the realm and which supervised the administrative personnel of Egypt.\textsuperscript{26}

In my opinion, E. Martin-Pardey, S. Quirke, and J.C. Moreno Garcia have placed insufficient weight on evidence indicating that the/a \textit{hwt-wrt} was indeed a law court. For example, the Abydos decree of Neferirkare contains the following passage: \textit{As for any man of the nome who will take any priests who are on the god’s field on which they do priestly...}

service in the nome for compulsory labor and any construction project of the nome, you shall send him to the hwt-wrt, he being put into the ‘granite’ (quarries) (?) and to cultivate barley and emmer. N. Strudwick remarks that it is clear from the Abydos decree that the/a hwt-wrt dealt with disputes arising from infringements to the exemptions granted to temples by the crown. Moreover, the text indicates that the/a hwt-wrt was where actual judgements took place and punishments were meted out.

J.C. Moreno Garcia thinks a letter of the Old Kingdom which, according to him, contains a complaint addressed by an official at the/a hwt-wrt by means of wptw, ‘messengers, envoys,’ reveals once again the administrative, not juridical, nature of the hwt-wrt, since the document evokes the difficulties in organizing a corvee of transport and the delivery of provisions. In fact, there is no evidence that the writer of the letter is an official at the/a hwt-wrt. The letter alludes to ‘the register of those adjudged (zš n wdtwn).’ In the next line the writer asks: Isn’t it due to the magistrates of the portico of the hwt-wrt that I have returned? Thus, the letter has a clearly juridical aspect. It is not clear what matter brought the letter writer before the hwt-wrt, but P. Posener-Kriéger thinks perhaps he was seeking the remuneration which he mentions twice in the letter. At any rate the case was not finally resolved because he complains through the envoys of the central government and takes an oath on the merit of his claim.

A clearer statement as to the nature of the/a hwt-wrt appears in Inscription B from the tomb of Nebkauhor which contains the passage: As for any person about whom I was aware that they were imprisoned on account of it in the hwt-wrt, or were beaten on account of it in the hwt-wrt, or who has been expelled from the bodyguard, I did not [...]. The text makes it clear that the hwt-wrt was both a place of confinement and of punishment. Both

Goedicke, Die privaten Rechtsinschriften aus dem Alten Reich, Wien 1970, pp. 94–99, Pl. 10; Strudwick, Texts from the Pyramid Age, p. 261 [195].
confinement and punishment were presumably the consequence of some transgression or offense and the end result of a hearing held in the hwt-wrt in the presence of the vizier as imy-r3 hwt-wrt 6 or by an imy-r3 hwt-wrt for less serious offenses.

The juridical nature of the hwt-wrt is also apparent from titles held by members of the legal profession. A number of these titles are compounded with the substantive wdc-mdw, ‘judgment.’ In addition to hry-sšt3 n wdc-mdw (nb) (št3) n hwt-wrt, ‘privy to the secrets of (every) (secret) judgment of the/a hwt-wrt,’ which occurs several times, there is a reference to imy-r3 wdc-mdw (nb št3) n hwt-wrt 6, ‘overseer of (every secret) judgment of the six hwt-wrt.’ Also compounded with wdc-mdw is smšt wdc-mdw n hwt-wrt, ‘who sets right the judgments of the/a hwt-wrt.’ Then there are titles beginning with wdc-mdw, ‘judge’:

wdc-mdw m hwt-wrt 6, ‘judge in the six hwt-wrt,’ and wdc-mdw št3 n hwt-wrt, ‘judge of the secret pleas of the/a hwt-wrt.’

This is not to deny that hwt-wrt had an administrative aspect. The Abydos decree of Neferirkare makes reference to things which my majesty has ordained and which have been received in the/a hwt-wrt. It thus seems that the king’s decrees were ‘received’ or registered in the/a hwt-wrt. W.F. Edgerton has pointed out for the New Kingdom that legislation in ancient Egypt seems to have been the function of the Pharaoh alone. Presumably, this was also the case for earlier periods and the decrees deposited in the hwt-wrt represented the will of the king in written and codified form. A number of scribal titles (imy-r3 š(w) n hwt-wrt, shd š(w) n hwt-wrt, hrp š(w) n hwt-wrt, šš smsw n hwt-wrt, imy-r3 š(w) prw n hwt-wrt, zḥ shd š(w) n hwt-wrt) were also concerned with the administration of a/the hwt-wrt.

**HWT-śNH**

To A.H. Gardiner, the *hry wdb* was the official who presided over the royal meals in the ‘Mansion of Life,’ the king’s living- or dining-room (*hwt-śnh*). He was also the official in charge of the *htp-di-nsrw*, the gifts given by the king to courtiers and officials of his entourage as well as to gods and the dead.\(^48\)

J.C. Moreno Garcia disagrees with A.H. Gardiner’s identification of the *hwt-śnh* as the king’s living- or dining-room.\(^49\) He argues that the papyri of the Middle and New Kingdom which list the expenses and the deliveries of products for the banquets of the royal palace, the journal of the court of Sobekhotep II (?), for example, or the accounts of the palace of Seti I never mention the *hry-wdb (m) hwt-śnh*. Elsewhere, the *hwt-śnh* never figures in the inscriptions relative to the reversion of offerings, either among the departments of the State which deliver products to the funerary services of individuals or in the Abusir papyri as the source of revenues for the funerary complex of the king. On the other hand, the persons in charge of the *hwt-śnh* are attested exclusively at Memphis, and the same circumstance characterizes in general the *hryw-wdb*. The *hwt-śnh* then probably designates an institution of the capital, similar to the *hwt-wrt* and situated in the palace complex. In defense of his thesis, J.C. Moreno Garcia points to the official [Se]nedjemib who was *wr 10 hwt-śnh* and *wr 10 hwt-wrt*. He compares also the titles *jmy-rĀ 10 pr-śt*, *imy-rĀ 10 hwt-śnt* and *imy-rĀ 10 wāt nswt pr-śt*. He concludes that these titles suggest a restricted circle of dignitaries and of courtiers who acted perhaps as a council to the sovereign.

J.C. Moreno Garcia largely discounts A.H. Gardiner’s argumentation regarding the nature of the *hwt-śnh*. Gardiner observes that the title *hry-wdb m hwt-śnh* usually occurs after those titles relating to the king’s toilet such as *iry nfr-hāt*, ‘keeper of the headdress,’ or *hry-sśāt n pr-dwāt*, the *pr-dwāt* or ‘house of morning’ being the place where the king’s toilet was performed. As A.H. Gardiner points out, the toilet necessarily precedes the meal.\(^50\) He also shows that the title *hry-wdb* was closely bound up with the notion of feasting and with supplies for feasting.\(^51\) The bearer of the title was the official presiding over the king’s table, who saw to its supplies and who catered the wants of his guests and, by extension to the gods and to the dead.\(^52\)

In fact, the *hwt-śnh* itself is never mentioned as the source of offerings, even in the Old Kingdom. But the *hry wdb* is depicted in tombs making his characteristic gesture.

---

\(^51\) Ibid., pp. 85–88.

\(^52\) Ibid., p. 88.
(one arm raised in invocation), the legend that accompanies this gesture being *htp-di-nswt* or *pr(t)-hrw* or *wdn ht* or *wdt ht*. The first legend more than adequately describes the source of the offerings, while the other legends rather describe the nature of the ritual act itself.

While the title *hry-wdb* continues to appear sporadically in the Middle and New Kingdoms, the officiant of that name no longer participates in funerary rituals. In the reign of Senusert I, the High Priest of Ptah at Memphis, Senusert-ankh is *hry-wdb m hwt-\textsuperscript{2}nh*, but this is probably an archaism, like his titles of *s3 Mḥty* and *ḥm-ntr* of the ‘Double Axe’, and thereafter the *hwt-\textsuperscript{2}nh* itself disappears from the record. Its absence probably explains why that institution does not figure in the court journal of Sobekhotep II(?). In the New Kingdom, according to the *Wb* Zetteln, the *hwt-\textsuperscript{2}nh* appears only once, and then in the course of a funerary spell. By that time, the character of the *hwt-\textsuperscript{2}nh* may well have been transformed, as is definitely the case in Ptolemaic era, when the term comes to mean a temple or part of a temple, for example, Chamber II, of the ‘Geburtshaus’ at Philae. If so, this might explain why the *hwt-\textsuperscript{2}nh* did not deliver products for the banquets of the palace of Seti I.
